

HeyReach Tasks

Test cases:

1) Slow Response Time in LinkedIn Search Bar When Searching by URL

Summary:

Verify that the LinkedIn search bar responds within an acceptable time frame when searching by URL.

Preconditions:

User is logged into LinkedIn.
The internet connection is stable.

Test steps:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click to continue btn
5. Enter list name
6. Click to select accounts
7. Choose account
8. Enter URL
9. Click on Start importing btn

Expected results:

Search results should be promptly displayed when searching by URL in the LinkedIn search bar.

Actual Result:

If the response time is significantly slower than expected, the test will fail.

2) Inconsistent Search Results When Changing Searched Name

Preconditions:

User is logged into LinkedIn.
The internet connection is stable.

Summary:

Verify that the search results in the LinkedIn search bar are consistent when changing the searched name.

Test steps:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click to continue btn
5. Click to Search by keyword btn
6. Enter list name
7. Click to select accounts
8. Choose account
9. Enter Search keyword
10. Click on Start importing btn
11. Click on Edit name btn
12. Enter New List Name
13. Click on Confirm btn

Expected Result:

The search results for the first and the second name should be consistent each time the search is performed.

Actual Result:

If the search results vary inconsistently between searches, the test will fail.

3)Incorrect Display of Professions in Search Results When Searching by Category**Summary:**

Verify that the displayed professions in the search results are correct when searching by category on LinkedIn.

Preconditions:

User is logged into LinkedIn.

The internet connection is stable.

Test steps:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects

4. Click to continue btn
5. Click to Search by keyword btn
6. Enter the name of the profession
7. Choose account
8. Select the account
9. Enter the company name
10. Click on the start importing btn

Expected Result:

The displayed professions in the search results should accurately match the selected category.

Actual Result:

If the displayed professions do not match the selected category or are irrelevant to the search query, the test will fail.

4)Tag Renaming Issue: Changes Not Reflected for User

Summary:

Verify that changes made to a tag's name are correctly reflected for the user after renaming.

Preconditions:

User is logged into the system.

The user has existing tags assigned to contacts or items.

There is at least one tag that the user intends to rename.

Test Steps:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click on LinkedIn Groups (Members) field
5. Click to continue btn
5. Enter list name
6. Click to select account
7. Choose account
8. Enter Company Search URL
9. Click on Start importing btn
10. Click on one account
11. Select one account
12. Click on add btn

13. Create tag
14. Enter title of the tag
15. Click on save btn
16. Click on edit btn
17. Click on rename btn
18. Enter new title name
19. Click on save btn

Expected Result:

The tag's name should be successfully updated to the new name.

Actual Result:

If the tag's name is not updated, or if changes are not reflected for contacts or items, the test will fail.

5)Incorrect result count displayed when no results are expected.

Verify that the system displays an accurate result count when there are no expected results for a specific search.

Preconditions:

User is logged into the system.

Test Steps:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click on LinkedIn Posts (Reactors) field
5. Click to continue btn
5. Enter list name
6. Click to select account
7. Choose account
8. Enter Company Search URL
9. Click on Start importing btn

Expected results:

The number of results should be accurate and reflect the number of actual results. In this case it should be 84/84

Actual results:

If the format of the number of results displayed is incorrect, the test will fail.

Bug reports:**Preconditions:**

User is logged into LinkedIn.

The internet connection is stable.

1)Slow Response Time in LinkedIn Search Bar When Searching by URL**Summary:**

Users are encountering a notable delay in response time when utilising the LinkedIn search bar to search by URL.

Steps to reproduce:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click to continue btn
5. Enter list name
6. Click to select accounts
7. Choose account
8. Enter URL
9. Click on Start importing btn

Expected results:

Search results should be promptly displayed when searching by URL in the LinkedIn search bar.

Actual results:

There is a noticeable lag in response time, causing a delay of up to [specific duration] before search results are shown.

2)Inconsistent Search Results When Changing Searched Name

Preconditions:

User is logged into LinkedIn.
The internet connection is stable.

Summary: Users are experiencing a bug where changing the searched name in the search bar does not update or change the displayed search results on the platform.

Steps to reproduce:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click to continue btn
5. Click to Search by keyword btn
6. Enter list name
7. Click to select accounts
8. Choose account
9. Enter Search keyword
10. Click on Start importing btn
11. Click on Edit name btn
12. Enter New List Name
13. Click on Confirm btn

Expected results:

Search results should dynamically update to match the newly entered name in the search bar, providing accurate and relevant results.

Actual results:

The search results remain static and do not change when the searched name is modified.

3)Incorrect Display of Professions in Search Results When Searching by Category

Preconditions:

User is logged into LinkedIn.
The internet connection is stable.

Summary: Users are encountering a bug where, upon searching by a specific profession category, the displayed search results do not accurately correspond to the selected profession, showing results from different professions instead.

Steps to Reproduce:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click to continue btn
5. Click to Search by keyword btn
6. Enter the name of the profession
7. Choose account
8. Select the account
9. Enter the company name
10. Click on the start importing btn

Expected results:

The search results should exclusively include profiles associated with the selected profession category, ensuring accurate and relevant matches.

Actual results:

Search results include profiles from various professions, not aligning with the selected category.

4)Tag Renaming Issue: Changes Not Reflected for User**Preconditions:**

User is logged into the system.
The user has existing tags assigned to contacts or items.
There is at least one tag that the user intends to rename.

Summary:

Users are facing a bug where, upon attempting to rename a tag for a specific user, the tag name does not get updated as expected.

Steps to reproduce:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click on LinkedIn Groups (Members) field
5. Click to continue btn
5. Enter list name
6. Click to select account
7. Choose account
8. Enter Company Search URL
9. Click on Start importing btn
10. Click on one account
11. Select one account
12. Click on add btn
13. Create tag
14. Enter title of the tag
15. Click on save btn
16. Click on edit btn
17. Click on rename btn
18. Enter new title name
19. Click on save btn

Expected results:

Renaming a tag for a user should reflect the updated tag name immediately.

Actual results: Despite successfully initiating the tag renaming process, the changes are not reflected, and the old tag name persists.

5)Incorrect result count displayed when no results are expected.

Preconditions:

User is logged into LinkedIn.
The internet connection is stable.

Summary:

Incorrect result count format displayed

Steps to reproduce:

1. Open website
2. Click to Prospects & Companies
3. Click to Add new prospects
4. Click on LinkedIn Posts (Reactors) field
5. Click to continue btn
5. Enter list name
6. Click to select account
7. Choose account
8. Enter Company Search URL
9. Click on Start importing btn

Expected results:

The number of results should be accurate and reflect the number of actual results. In this case it should be 84/84

Actual results:

Displayed result count format is incorrect (0/84)
